Tarrant County 911 selects *InformaOne* as their LMS

San Antonio, TX, May 2014 - Informa Systems, Inc., today announced that the Tarrant County 911 District has selected *InformaOne* as their Learning Management System (LMS) to manage the delivery of learning to their customers.

The goal of Tarrant County 911 District is to provide reliable, accurate, responsive and effective emergency communication networks. In order to ensure this goal is met, they provide training to 911 operators. Informa Systems developed a public calendar for the District that enables the public to respond to learning opportunities and to register for upcoming classes.

By integrating all areas of e-Learning into one common product, clients can easily and quickly develop, deploy, manage and communicate using a common user interface. “By using a suite approach, Informa Systems is helping to define the emerging face of e-Learning, deploying services that touch a trainer’s daily experience, such as course authoring, community portals and online communication,” stated Lorna Zimmermann, Informa Systems’ Director, Sales and Marketing Division.
